2016 - 2017

Welcome to the **SCAN**® range of Safety & Workwear products

The SCAN brand offers a comprehensive range designed to meet the needs of both DIY and Trade Users.

The SCAN range of safety products is designed to protect wearers in the most frequently occurring circumstances under which personal protection is either required or recommended in building, construction, maintenance and associated industries.

User comfort and long lasting service are the main considerations for the SCAN range of workwear products which are designed to cater for the needs of both the professional user and enthusiastic DIYers.

The products are manufactured to a standard that reflects the tough environment in which they are likely to be worn.

CONFORMS TO
**EN352-1

Product Information: We have taken every care to ensure that the list prices and descriptions are correct at the time of going to print. SCAN cannot be held liable in respect of any errors or omissions herein contained or for any loss or damage, malfunction or consequential loss arising from reliance upon this publication.

General Disclaimer: It is the responsibility of employers and individuals to carry out proper risk assessment by qualified Health & Safety personnel of any situation, activity or process where there is a potential risk or hazard which would be detrimental to an individual if exposed to it. SCAN shall not be held liable for any loss, damage or injury sustained from the misuse of any of its products if no proper risk assessment has been carried out.

Personal Protection Equipment

The largest part of this range is dedicated to the area of Personal Protection Equipment and is designed to provide solutions for protection to ears, eyes, face, hands and head.

Almost on a daily basis legislation is increasing, relevant to the protection of the individual, within the working environment.

In order to meet these demands all SCAN products are tested to ensure that they comply with British, European or International specifications and all comply with current legislation as applicable.

If a product is not listed within this catalogue, it does not mean that we do not have access to it. Any bespoke requests should be passed back to us and we will be pleased to assist.

Head Protection

Safety Helmets

Compulsory on British building sites since March 1990, hard hat protection provides a rigid shell that resists and deflects blows to the head with a suspension system inside the hat that acts as a shock absorber.

Head protectors are essential for site workers and the safety requirements of workers needing protection from falling objects or striking against fixed obstacles.

Outer Shell

Tough, functional and impact resistant.

Protective Peak

A rain gutter directs water round to the front peak and away from you.

Top Vents

The top vents allow hot air out. Cooler air is drawn in reducing temperatures by 2-3°C.

Size Adjustment

6 point harness with adjustable rear strap.

Own Logo Branding

All SCAN safety helmets can be branded with your corporate logo or company details.

Logo Colours

- A maximum of 6 colours can be printed.
- Ink colours may vary slightly when printed on different safety helmet colours. We do not recommend printing light colours onto dark coloured helmets because the helmet colour may show through the ink.
- It is important to identify the colour of the safety helmet on your order form. Your helmet colour may be one of the colours in your logo, thereby reducing the number of colours charged in the logo price.

Printing

- We use the latest technology to print clear, crisp logos in up to 6 colours
- Pad printed logos are permanent and will not peel, crack or fade
- Pad printed logos are nonconductive and do not affect helmet performance
- Helmets are printed in 10 working days from approval of artwork
- Minimum order quantities apply

Standard Industrial Vented Helmet

Manufactured from high density polyethylene and featuring top vents, a pinlock harness and a rain gutter.

**CONFORMS TO
EN397:1995
+ A1:2000**

- Helmet weight 340g
- 6 point polyethylene harness with sweatband
- Pin lock adjustment from 530mm - 630mm

SCA PPESHB	Blue
SCA PPESHR	Red
SCA PPESHW	White
SCA PPESHY	Yellow
Exc VAT	£5.77 €7.96

De-Luxe Industrial Vented Helmet

A tough and functional high density polyethylene helmet with top vents, terylene harness with ratchet and a rain gutter.

**CONFORMS TO
EN397:1995
+ A1:2000**

- Helmet weight 380g
- 6 point terylene harness with sweatband
- Ratchet knob quick adjustment from 530mm - 630mm

SCA PPESHDELW	White
SCA PPESHDELY	Yellow
Exc VAT	£7.83 €10.81

Forestry Helmet Kit

A combination of helmet, ear defenders and visor carrier.

- Helmet weight 350g
- Six point suspension harness
- Fully adjustable slip ratchet headband
- Helmet conforms to EN397:1995
- Ear defenders conform to EN352-3:2002
- Wire gauze visor protects the face against large flying particles. Conforms to EN1731

**SNR
25.9dB**

SCA PPESHFOR	Red
Exc VAT	£41.36 €57.08

Top Cap Baseball Style

Similar in appearance to a baseball cap with built-in protection against slight knocks or striking fixed objects. Not suitable for site use.

Colour Black

- Size 58 - 68cm
- 6 top ventilation holes
- High density polyethylene liner
- Quick and easy velcro tab adjustment

SCA PPECAPN

Eye Protection

Direct Ventilation Goggle

A directly ventilated goggle for protection against medium energy high speed impacts.

- Soft vinyl flanges around the goggles ensure comfort and conformity to facial contours
- Top and side perforations allow optimum airflow
- Tough polycarbonate clear UV resistant lens
- Elasticated headstrap

Display Box of 12

SCABULGOOGLE		Box of 12
Exc VAT	£46.35 (£3.86 ea)	€63.96 (€5.33 ea)
Inc VAT	£55.62 (£4.64 ea)	€78.67 (€6.56 ea)

NEW

CONFORMS TO EN166:1B

will withstand medium energy high speed impacts up to 120m/s (268mph)

Visitor Spectacles

A wrap-around eyeshield for protection against low energy high speed impacts.

- Comfortable wide frame and integral brow shield gives improved all round protection
- Ultra lightweight, can be worn over most prescription glasses
- Clear polycarbonate UV resistant lens

Display Box of 12

SCABULSPEC		Box of 12
Exc VAT	£43.26 (£3.61 ea)	€59.70 (€4.98 ea)
Inc VAT	£51.91 (£4.33 ea)	€73.43 (€6.12 ea)

NEW

CONFORMS TO EN166:1F

will withstand low energy high speed impacts up to 45m/s (100mph)

Wrap Round Spectacles

A wrap-around eyeshield for protection against low energy high speed impacts.

- Wrap-around panoramic vision with built-in side shields for extra lateral protection
- Lightweight and strong construction
- One piece impact and scratch resistant, clear polycarbonate lens with UV protection

Display Box of 12

SCABULSPECWR		Box of 12
Exc VAT	£46.35 (£3.86 ea)	€63.96 (€5.33 ea)
Inc VAT	£55.62 (£4.64 ea)	€78.67 (€6.56 ea)

NEW

CONFORMS TO EN166:1F

will withstand low energy high speed impacts up to 45m/s (100mph)

Direct Vent Goggle

A directly ventilated goggle providing ideal protection for chiselling and chasing.

- Large size direct ventilation through frame
- Compact lightweight construction
- Can be worn over spectacles

SCA PPEGDV		
Exc VAT	£4.67	€6.44
Inc VAT	£5.60	€7.93

CONFORMS TO EN166:1B

will withstand medium energy high speed impacts up to 120m/s (268mph)

Elasticated headstrap

Soft vinyl flanges around the goggles

Perforations allow optimum airflow

Tough polycarbonate UV resistant lens

Indirect Vent Goggle

An indirect ventilated goggle ideal for use with power tools, particularly angle grinders and high powered drills.

- Large size indirect ventilation
- Protection from liquid droplets or splashes, large dust particles and molten metals
- Can be worn over spectacles

SCA PPEGIDV		
Exc VAT	£5.81	€8.02
Inc VAT	£6.97	€9.86

CONFORMS TO EN166:1B(3.4.9)

will withstand medium energy high speed impacts up to 120m/s (268mph)

Elasticated headstrap

Soft vinyl flanges around the goggles

Indirect vents minimise lens misting

Tough polycarbonate UV resistant lens

Visitor Safety Spectacles

A wrap-around eyeshield for protection against low energy high speed impacts.

- Comfortable wide frame and integral brow shield gives improved all round protection
- Ultra lightweight, can be worn over most prescription glasses
- Clear polycarbonate UV resistant construction

SCA PPESPECVI		
Exc VAT	£4.33	€5.98
Inc VAT	£5.20	€7.35

CONFORMS TO EN166:1F

will withstand low energy high speed impacts up to 45m/s (100mph)

Suitable for use over spectacles

Classic Spectacles

A wrap-around eyeshield for protection against low energy high speed impacts. With extendable ratchet arms.

- Lightweight and strong construction
- Adjustable ratchet side arms give greater comfort
- One piece impact and scratch resistant, clear polycarbonate lens with UV protection

SCA PPESPCLCL		
Exc VAT	£5.09	€7.02
Inc VAT	£6.11	€8.64

CONFORMS TO EN166:1F

will withstand low energy high speed impacts up to 45m/s (100mph)

Adjustable SLIDING ARMS
SLIDE RATCHET ARM

Wrap-around panoramic vision with built-in side shields for extra lateral protection

Wraparound Spectacles

These sports-style curved safety spectacles provide protection against low energy, high speed impacts. They are UV resistant - thus acting as sunglasses - and have impact and scratch resistant polycarbonate lenses.

The lightweight nylon frame has a soft, flexible nosepiece supporting a one-piece curved lens, which maximises peripheral vision. The side-arms are fully adjustable both in length and angle to ensure a comfortable custom fit.

- One piece lens to maximise peripheral vision
- Impact and scratch resistant, polycarbonate lens with UV protection
- Side arms are extendable and tiltable for a custom fit
- Soft flexible comfort nose bridge
- Lightweight nylon frame

will withstand low energy high speed impacts up to 45m/s (100mph)

COLOURED LENSES . . . filter light for specific applications and enhance different aspects from indoor low light to outdoor high contrast purposes.
. . . choose the right one for the job!

AMBER	Indoor low light applications, enhancing contrast.
SMOKE	Outdoor applications. Protection from excessive glare.
CLEAR	For general purpose indoor applications.
MIRROR	Reduces glare, commonly used in outdoor applications.
BLUE	For indoors where there is excessive yellow or sodium vapour light. Offers a high level of contrast.

Respiratory Protection

Introduction to Respiratory Protection

To help you meet Health & Safety Executive demands for personal protection, the SCAN respiratory range offers an extensive range of disposable masks and respirators.

The Hazards

Dust

Formed by the breaking down of solid materials, normally when materials are altered. For example, sanding, cutting, grinding and brushing. In general the smaller the dust particle the greater hazard that it represents. Fibres from materials should also be treated as dusts.

Vapour

A gaseous state formed by evaporation from substances that are normally either solid or liquid at room temperature (e.g. methylated spirits, petrol). Many industrial processes used in degreasing vapourise particularly quickly once heated.

Fumes

Formed by the vaporisation of a solid material by the application of intense heat. Extremely fine particles are formed as fumes cool and condense. Many processes form fumes; such as smelting, pouring metals and many welding applications.

Mist

Formed by processes that involve atomisation (such as spraying, cleaning and cutting/grinding using coolants) and consist of tiny liquid droplets rather like steam in a bathroom.

**CONFORMS TO
EN149:2001
A1:2009**

Filtering Face Piece for Particulates

Designed to cover the nose, mouth and chin. The construction is made of the filter material itself. To be disposed of after each period of work or 8 hour shift (max).

Understanding the Standard

EN Number	Filter/Class	Allowable Penetration	APF	NPF
EN149	FFP1	20%	4 x OEL	4
	FFP2	6%	10 x OEL	12
	FFP3	1%	20 x OEL	50

APF - Assigned Protection Factor

Level of respiratory protection that can be expected to be achieved in the workplace by 95% of adequately trained and supervised wearers using a properly fitted and functioning respiratory protective device.

OEL - Occupational Exposure Limit

The OEL is the 'Safety' line decided upon by the Health and Safety Executive.

NPF - Nominal Protection Factor

The potential maximum protection factor using the maximum percentage inward leakage permitted for a given standard class of respiratory protective device, expressed as a ratio:

$$\frac{100\%}{\% \text{ allowable inward leakage}}$$

Half Mask Respirators

**CONFORMS TO
EN140**

The European standard that covers the technical specifications for half masks which cover the nose, mouth and chin. They have their face piece manufactured from natural or synthetic based rubber allowing the mask the flexibility to fit the contours of the face.

Half Mask Respirators

**CONFORMS TO
EN143**

Covers particle filters. These are classified according to their filtering efficiency P1, P2 and P3. P1 filters are intended for use against solid particles only, P2 and P3 filters are subdivided according to their ability to remove both solid and liquid particles or solid particles only.

Disposable Masks

Unlike other bodily injuries respiratory injuries are not readily apparent in the workplace. In some cases it may not be until after workers retire that symptoms occur. It is therefore important that all staff that are, or may be at risk have access to Respiratory Protective Equipment.

Understanding the protection levels of our masks will ensure you have the correct product for your working environment.

DUST VAPOUR

MIST FUMES

Each product will have 1 of 3 protection levels

FFP1

Low toxicity

- General dust
- Water based spray
- Paint mist (water based)

Particles larger than 5 microns

FFP2

Low to average toxicity

- Sanding of softwood
- Hand sanding MDF
- Ceramic tile dust
- Cutting slabs

Particles between 2 & 5 microns

FFP3

High toxicity

- Loft insulation
- Hardwood & MDF cutting
- Stone cutting
- Plastering

Particles less than 2 microns

NR

Single Shift Use Only

These masks are for single shift use only To be disposed of after each period of work or 8 hour shift (max).

D

Best Dust Protection

These masks have passed the optional DOLOMITE clogging test, giving the user better breathing resistance for longer.

Moulded Comfort Masks

Reduces discomfort caused by coarse particles. For garden, garage cleaning and other domestic jobs.

- Lightweight and disposable
- Comfortable to wear
- Elasticated retaining straps
- Non PPE respiratory item

Mask Product Selector

This table is a quick selector guide to help you select the correct SCAN disposable mask or respirator for a selection of hazards that may be encountered in the occupational area. It should not be used as the only means of selecting a respirator and it does not relieve the employer/user of their duties as described by COSHH and other Health & Safety Executive Regulations. It does not in any way override any recommendations made in the required appropriate COSHH/Risk assessment.

NB. For any application involving the removing or disposal of ASBESTOS, PLEASE CONTACT THE SCAN HELPLINE: 0845 673 3331

Respirator Filter Type

A - Organic vapours & gases
1 = Low capacity

P = Dust filter

Hand Protection

Providing protection for mechanical risks.

This standard applies to all kinds of protective gloves in respect of physical and mechanical aggressions caused by abrasion, blade cut, tearing and puncture.

	4 = Abrasion	Performance Index 1-4
	5 = Blade Cut	Performance Index 1-5
	4 = Tear	Performance Index 1-4
	3 = Puncture	Performance Index 1-4

Protection against mechanical risks is expressed by a

pictogram followed by four numbers each representing test performance against a specific risk. The performance level is from 1-4/5, where 4 or 5 is the best result.

The level of performance is based on the number of cycles/force required to penetrate the sample.

- Resistance to abrasion: based on the number of cycles required to abrade through the sample glove.
- Blade cut resistance: based on the number of cycles required to cut through the sample at a constant speed.
- Tear resistance: based on the amount of force required to tear the sample.
- Puncture resistance: based on the amount of force required to pierce the sample with a standard sized point.

	Performance Level Cycles					
	0	1	2	3	4	5
Abrasion (cycles)	<100	100	500	2000	8000	–
Blade Cut (factor)	<1.2	1.2	2.5	5.0	10.0	20.0
Tear (newton)	<10	10	25	50	75	–
Puncture (newton)	<20	20	60	100	150	–

EN388 Hand Protection Product Selector

Scan offer a wide range of gloves for many different working conditions, from lightweight through to heavy-duty.

To ensure all our customers select the correct gloves we provide a comparative chart, to help you easily select the right level of protection for your needs.

High Visibility

Introduction to High Visibility Workwear

All protective high visibility gear should meet the requirements of The Safety at Street Work and Road Works Code of Practice.

British Standard **EN 471** sets minimum standards of visual performance and durability needed for high visibility clothing worn in the course of a trade or profession and is **mandatory**. **BS EN 471** provides for three classes of basic design (Classes 1, 2 and 3) and two levels of retro-reflectivity Level 1 and Level 2, appropriate to the risks in a particular occupational environment. (Level 2 gives the highest reflectivity).

APPROPRIATE ROAD USES

CLASS 1 EN471 LOW

Class 1 is the lowest level of protection and should only be worn in areas of minimal risk, e.g. off-road situations. For occupations that require the wearer to be working with road traffic they will require class 2 or higher.

Appropriate for off-road uses

Class 1 garments are NOT suitable for working with road traffic.

CLASS 2 EN471 INTERMEDIATE

Class 2 is the minimum requirement when working on roads. Certain industries may have established codes of practice that give guidance on the selection of high visibility clothing, when working in certain road conditions.

Appropriate for road uses

Only suitable on roads where the speed limit is LESS than 40mph.

CLASS 3 EN471 HIGH

Class 3 incorporates the largest areas of fluorescent and reflective materials. Class 3 should be worn on trunk roads and all other roads forming the Primary Route Network (PRN), as well as roads displaying green/blue directional signs.

Appropriate for road uses

Should be worn on all roads where the speed limit is 40mph and above.

HIGH-VISIBILITY PPE AND RETRO-REFLECTIVE BAND CLASSES

There are 3 PPE categories:

Category I: PPE to protect against minimum risks

Category II: PPE to protect against medium to high grade risks, although not mortal or irreversible

Category III: PPE to protect against life-threatening or irreversible risks

X High-visibility PPE classes:

Class 1: Low visibility level fluorescent 0.14m², retro-reflective 0.10m² or combined 0.20m²

Class 2: Medium visibility level fluorescent 0.50m² and retro-reflective 0.13m²

Class 3: High visibility level fluorescent 0.80m² and retro-reflective 0.20m²

Y Retro-reflective band classes:

Class 1: Medium retro-reflective level

Class 2: High retro-reflective level

Water Penetration/ Breathability

This standard encompasses materials and stitching and is divided into two sections: water penetration and resistance to water vapour.

For water penetration there are three classes, where Class 2 requires Wp (water pressure) ≥ 8000 Pa and Class 3 requires Wp ≥ 13000 Pa. Class 1 requires the same as Class 2, but without pre-treatment.

For resistance to water vapour (RET), (the lower the rating the greater the penetration) there are 3 classes:

Class 1: RET ≥ 40 **Class 2:** 20 < RET ≤ 40 **Class 3:** RET ≤ 20

Protective Clothing Labels

General requirements

- Manufacturers mark
- Product identifying mark
- Size or size range
- Specific hazard protection plus performance levels where applicable
- Care labelling

HiVizzD

TECHNOLOGY
Superior Distance Signalling

Increases the high visibility nature of the retro-reflective bands, enabling the wearer to be seen at greater distances when illuminated.

Waistcoats

100% polyester (PES) with hook and loop front fastening.
Finished with black bound edging.

- Fluorescent background highly visible during day
- HiVizzD technology (superior distance signalling)
- Parallel horizontal and vertical retro-reflective tape bands width 50mm

FOAM

Ideal for most applications where a repeated kneeling action is required such as: carpet laying, cleaning, home renovation, plumbing, painting etc.

- Abrasion resistant surface
- Breathable Neoprene strap with hook & loop fixing
- Reinforced nylon strap with buckle

SCA PPEKP		
Exc VAT	£17.65	€24.36
Inc VAT	£21.18	€29.96

Pro Gel Kneepads

GEL

An ultra comfort gel filled pad that's ideal for most applications and for different surfaces such as: uneven surfaces, laminate flooring, roofing work, concrete, gardening etc.

- Large over-sized covers for better protection
- Breathable Neoprene strap with hook & loop fixing
- Elasticated & adjustable upper strap with quick release clip buckle
- Lower strap secures below the knee for comfort all day long

SCA PPEKPGEL		
Exc VAT	£21.45	€29.60
Inc VAT	£25.74	€36.41

Disposable Overall

A heavy-duty disposable overall designed for hardwearing use that gives protection for solid particles exposure and low-level liquid aerosols from water-based chemical sprays.

- Concealed zip
- External triple stitched seams
- Elasticated 3 panel hood, waist and ankles

Foot Protection

Safety Footwear

All of the boots in the SCAN range benefit from having steel mid-soles to ensure underfoot protection and steel toe-caps which will withstand 200 Joules of impact, giving all round protection to the wearers feet.

The soles have a slip resistant pattern with an energy absorbing heel.

They are antistatic and resistant to oil.

They are compliant with current EN Standards: EN ISO 20345:2011 - S1 P SRC.

Fall Arrest Protection

2 Point Anchorage Fall Arrest Harness

The most commonly used full body harness comes with metal D-Ring attachment and leg straps. Suitable for most work at height applications in the construction industry (scaffolders, steel erectors etc).

Falls from height are the most common cause of fatal injury and the second most common cause of major injuries, accounting for around 15% of all such injuries in the workplace.

Dorsal and Front Fall Arrest Link

Rear dorsal plate slides upwards to keep the user upright after a fall

Robust metal front attachment point

Fully adjustable leg, shoulder & chest straps

- Polyester webbing
- Front and rear attachment
- Shoulder, leg and chest adjustment
- Conforms to EN 361
- Complete with storage bag

Inspecting fall arrest equipment made from webbing or rope

The following information may prove useful for anyone supplying fall arrest equipment incorporating energy-absorbing lanyards made from webbing. It gives generic advice on inspection regimes for this equipment where it is used to provide protection against falls from a height. However, many of the principles can also be applied to non-energy-absorbing lanyards and safety harnesses used for the same purpose. They can also be applied to similar equipment made from rope. It does not cover other equipment such as anchor points.

Employers should consult the manufacturer and/or supplier of the equipment for any product-specific inspection requirements.

Introduction

An energy-absorbing lanyard is a line for connecting a full body harness to an anchorage point with an inbuilt device that reduces the impact of a fall. There is a wide range of possible causes of degradation of synthetic fibres used in webbing and rope lanyards (including abuse, general wear and tear, edge/surface damage, ultraviolet light, dirt, grit, chemicals).

Research involving synthetic fibre webbing lanyards has confirmed a number of the potential causes of degradation. It also highlighted that there is no well-defined boundary (eg usable life) separating those lanyards that are safe and those that are not (eg a 1 mm cut in the edge of a lanyard can result in a 5 to 40% loss of strength depending on the make of lanyard being used). It is therefore essential that if lanyards are to be maintained to provide the required level of protection they are subject to an effective inspection regime.

Legal requirements and standards

The Personal Protective Equipment at Work Regulations 1992 (as amended) require employers to maintain fall arrest equipment in good repair, including appropriate replacement. In addition, the Work at Height Regulations 2005 require that equipment which is exposed to conditions causing deterioration which is liable to result in dangerous situations should be inspected at suitable intervals and each time exceptional circumstances which might jeopardise safety have occurred.

BS EN 365:2004 *Personal protective equipment against falls from a height. General requirements for instructions for use, maintenance, periodic examination, repair, marking and packaging* gives general requirements for periodic inspection, instructions for use and marking of PPE against falls from a height. To counter the causes of degradation listed in the Introduction, the British Standard states that components should be examined **'at least twelve-monthly'**. This is sometimes taken to be 'annually', although manufacturers of textile products usually recommend inspection more frequently than this.

Inspection regime

The inspection regime recommended in this leaflet has been discussed with representatives of manufacturers, suppliers, installers and major users via the British Standards Institution Technical Committee PH/5 (industrial safety belts and harnesses), the British Safety Industry Federation Height Safety Group and the Work at Height Safety Association.

Employers should establish a regime for the inspection of lanyards that is drawn up by a competent person. The regime should include:

- the lanyards to be inspected (including their unique identification);
- the frequency and type of inspection (pre-use checks, detailed inspection and,
- designated competent persons to carry out the inspections;
- action to be taken on finding defective lanyards;
- means of recording the inspections;
- training of users; and
- a means of monitoring the inspection regime to verify inspections are carried out accordingly.

Medical Protection

Household & Burns

A 45 piece kit supplied in a weatherproof four pocket travel bag with handle and belt clips. Suitable for use in the home and outdoors to treat burns, grazes and cuts.

SCA FAKGP		
Exc VAT	£17.67	€4.38

NEW BS-8599 British Standard Workplace First Aid Kits

What the law says

The Health and Safety (First Aid) regulations 1981 states:-

“An employer shall provide or ensure that there are provided such equipment and facilities as are adequate and appropriate in the circumstances for enabling first-aid to be rendered to his employees if they are injured or become ill at work”

. . . The new BSi first aid kits are now the only safe and clear way for an employer to meet their obligations . . .

The HSE position

The Health and Safety Executive have been closely involved in the creation of this standard, being members of the BSi standards committee. The current guidelines contained in document L74 from the HSE are met and exceeded by the new BSi standard.

Why did we need a new standard?

Despite many EU states having a national standard for workplace first aid kits, until now, the UK did not. The BHTA guidelines, established in 1997 were in need of revision because training protocols have changed, there are heightened concerns with infection control, and new technology is now available at affordable prices.

There was only one pair of gloves in a 10 person kit - yet 33 dressings. There were 4 triangular bandages - even though the training protocols no longer indicate their use for immobilisation of lower limb fractures. Burns gel dressings are extensively used in first aid - now very available and affordable.

The new kits have good quantities of plasters and wipes, a common criticism of the old ones.

The New Contents

Gloves

More quantity reflecting the need, and Nitrile type in line with NHS and St. John Ambulance guidelines.

Plasters

Sensible quantities, reflecting consumer demand.

Wipes

Increased quantities, reflecting consumer demand. New specification is sterile and now must meet the European CE marking rules.

Triangular Bandages

Quantities are reduced reflecting the change in training first aid protocol, where immobilisation of lower limbs using triangular bandages is no longer indicated.

Finger Dressings

A smaller finger dressing is introduced specifically for finger injuries that are too large for first aid plasters, dressing complete with an easy-fix adhesive tab.

Medium & Large Dressings

Fewer quantities, reflecting consumer demand.

Burns Gel Dressing

Every employer with as much as a kettle, must have a risk from burns. A modern burns gel dressing is added to meet this risk, together with a conforming bandage to attach and retain it.

Shears

Clothing around wound sites needs to be removed to allow first aid treatment. Shears, capable of cutting fabric and leather enable this removal.

Adhesive Tape

Many first aiders prefer not to use safety pins, where additional injury could potentially be caused. Adhesive tape is an easy and inexpensive way to secure dressings and bandages. Safetypins are retained, allowing users a choice of application.

Foil Emergency Blanket

Clinical shock presents one of the most serious life threatening risks to a casualty, treatment includes keeping the casualty warm. The introduction of the foil survival blanket enables this.

Mouth To Mouth Resuscitation Device

The introduction of a mouth to mouth resuscitation device, incorporating a one way valve, protects the first aider from infection from body fluid pathogens.

Eye Wash

Incorporated into the travel kit since fixed eye wash stations are unlikely to be available. The environment of a travelling worker is unpredictable and could include a risk to eyes.

First Aid Guidance Leaflet

Conforming to the latest HSE guidance.

In our range there are two sizes of first aid kits available.

No of Employees	SCAN Product Code
1 to 25	SCA FAK125BS
1 to 100	SCA FAK1100BS

What size is required?

Employers are required to make a risk assessment to decide what the hazard levels are and how many employees are involved in the area to be covered. There is a useful guide provided to help match this risk assessment to an appropriate size kit.

Cleaning Emergency

A range of products for coping with spills involving water, oil, fuel and chemicals.

Absorbent Pads

Absorbent pads are ideal for dealing with small leaks and spills. Designed specifically to absorb oil, fuel and solvents. They are bonded for extra strength.

- Pad dimensions 550 x 450mm
- Able to absorb over a litre per pad

General Purpose

Absorbs:

- Non-aggressive fluids
- Coolant
- Oil
- Water
- Solvents

SCA SCGPPAD10		
General Purpose - Pack of 10		
Exc VAT	£10.99	€15.17
Inc VAT	£13.19	€18.65

Oil & Fuel

Absorbs:

- Solvents
- Fuel
- Oil

SCA SCOFFPAD10		
Oil & Fuel - Pack of 10		
Exc VAT	£10.99	€15.17
Inc VAT	£13.19	€18.65

Chemical

Absorbs:

- Strong chemicals
- Solvents
- Acid

SCA SCCHPAD10		
Chemical - Pack of 10		
Exc VAT	£12.90	€17.80
Inc VAT	£15.48	€21.90

Spill Kits

Spill kits are ideal for dealing with larger spills of up to 18 litres. The high performance absorbent socks help contain leaks.

These kits each contain:

- 10 high performance absorbent pads (40 x 50cm)
- 2 high performance absorbent socks (8 x 120cm)
- 1 disposal bag with tie

General Purpose

Ideal in the plumbing trade for boiler leaks etc.

Absorbs:

- Non-aggressive fluids
- Solvents
- Coolant
- Water
- Oil

SCA SCGP18L		
General Purpose		
Exc VAT	£30.06	€41.48

Chemical

Ideal for laboratories, workshops and small units.

Absorbs:

- Strong chemicals
- Solvents
- Acid

SCA SCCH18L		
Chemical		
Exc VAT	£34.82	€48.05
Inc VAT	£41.78	€59.10

Drum Toppers

These absorbent pads are cut to fit the top of 205 litre drums. They absorb drips and leaks, and help to keep the drum-top clean.

56cm diameter

- Absorbs:**
- Hydraulic oil
 - Lubricating oil
 - Fuel
 - Solvents

SCA SCDRUM5	Pack of 5
Exc VAT £23.83	€32.89
Inc VAT £28.60	€40.45

- Pre-cut holes for access to drum contents.

Drip Pan with pouring spout

Manufactured from tough, impact resistant plastic with a corner pouring spout for safe and easy emptying. Ideal for catching drips and leaks.

16 litres

SCA SCPAN16	16 Litres
Exc VAT £16.46	€22.71
Inc VAT £19.75	€27.94

- Height 9.5cm
- Length 53cm
- Width 40cm

Drip Tray

Made from tough impact resistant plastic. Ideal for catching drips and leaks from vehicles, machinery and hoses. Prevents floor contamination.

28 litres

SCA SCTRAY28	28 Litres
Exc VAT £18.82	€25.97
Inc VAT £22.58	€31.95

- Height 7cm
- Length 60cm
- Width 60cm

Universal Absorbent Quick-rip Roll

A non-linting absorbent roll. Bonded for strength and perforated bi-laterally for easy tearing in both directions. Extremely versatile and much stronger than normal paper wipes. Use it as a "sock" to contain leaks, into tight spots or as a general pad under leaky machines.

- Absorbs:**
- Coolant
 - Oil
 - Water
 - Solvents
 - Non-aggressive fluids

SCA SCUAROLL	
Exc VAT £38.35	€52.92
Inc VAT £46.02	€65.10

- Width 31cm
- Length 31 metres

Supplied in a box with a dispensing slot and carry handle for easy use.

Paper Towel Wiping Roll

Essential for all cleaning and wiping tasks, this two-ply blue paper roll is perforated to give an economical 430 sheets.

For general purpose wiping in kitchens, workshops and garages.

SCA SCPAPROLL	
Exc VAT £9.37	€12.93
Inc VAT £11.24	€15.90

- Width 20cm
- Length 150 metres

Comes in a ready-to-use centre feed dispenser to keep rolls clean and dry.

Safety Signs

SITE SAFETY NOTICE
Unauthorized entry to this site is strictly prohibited

WARNING CONSTRUCTION IN PROGRESS
Parents are advised to warn children of the dangers of entering construction sites

1. All visitors must report to the site office.
2. Permission must be obtained before entering the site or any work area.
3. Safety signs and procedures must be observed.
4. Personal protection and safety equipment must be used at all times.
5. All persons entering this site must comply with the regulations under the Health & Safety at Work Act 1974.

Safety helmets must be worn

Protect

A white rectangular sign with a red circle and a diagonal slash over a black silhouette of a person walking, indicating that entry is prohibited.

NO ENTRY
Unauthorized personnel

Ear protection must be worn

A blue rectangular sign with a white glove icon and text.

Gloves must be worn

A green and white sign with a white cross icon and text.

First Aiders Are:

A yellow triangular sign with a black silhouette of a person falling and text.

WARNING Fragile Roof

Design a Sign

Our bespoke sign manufacturing team have had many years of experience in designing, making and fitting a massive variety of signs and stencils nationwide.

From the smallest 'one-off' vinyl sign to the large retail signs to print runs of thousands of own branded safety signs, we can be depended upon to provide a fast, quality service at a reasonable cost.

We are happy to work with you to design a sign to your exact specifications. We can work with artwork provided or redesign new artwork as desired - Please contact our Enquiries Hotline to discuss the options available.

To order a custom sign, this is what we need to know:

1. The Size and Material
2. The colours and symbol required
3. Quantity needed
4. The text required on the sign
5. Any other considerations such as specific Pantone colours, fixing methods or company logo's.

It will help if you can provide a rough sketch of the sign (like above). If you need advice on the correct colours or symbols required, or if you require advice on specific legislation then we would be pleased to help.

A sign should convey to the reader its message as clearly and in as short a time as possible, whilst ensuring the information given is complete and accurate.

Symbols and Colours

Health and safety signs can be broken down into the following categories, as specified by British Standards.

Mandatory Signs
 Colour: White & Blue
 A blue circle containing a white image denoting that a specific course of action must be taken.

Prohibition Signs
 Colour: Black, Red & White
 A red circular band crossed with a diagonal bar on a white background. A black symbol behind this band indicates the prohibited action.

Hazard Signs
 Colour: Black, Yellow & White
 A yellow triangle with a black border and symbol denoting a hazard in the environment.

Safe Condition Signs
 Colour: White & Green
 A green rectangle or square with a symbol/text in white providing information about safe conditions.

Fire Equipment Signs
 Colour: White & Red
 A red rectangle or square with a symbol/text in white providing information about the location and use of fire fighting equipment.

The signs contained within this catalogue are just a small selection from our overall range of over 10,000 safety signs that are available within 48 hours.

For further details please ask your local stockist or request our Safety Sign Catalogue.

ISO 7010 - A Guide To New Sign Symbols

You may notice a number of changes to our Safety Signs this year. The HSSA has adopted the latest ISO 7010 symbols outlined in Amendments 1-6. These combine with some of the more familiar BS 5499 symbols to complete the HSSA assured range.

ISO 7010 has been devised to create consistent symbols, using new pictograms, which have been judgment tested across various EU countries to ensure the symbols are universally understood and recognised. The new symbols are based upon BS 5499, some have subtle differences and others are extremely different.

Mandatory

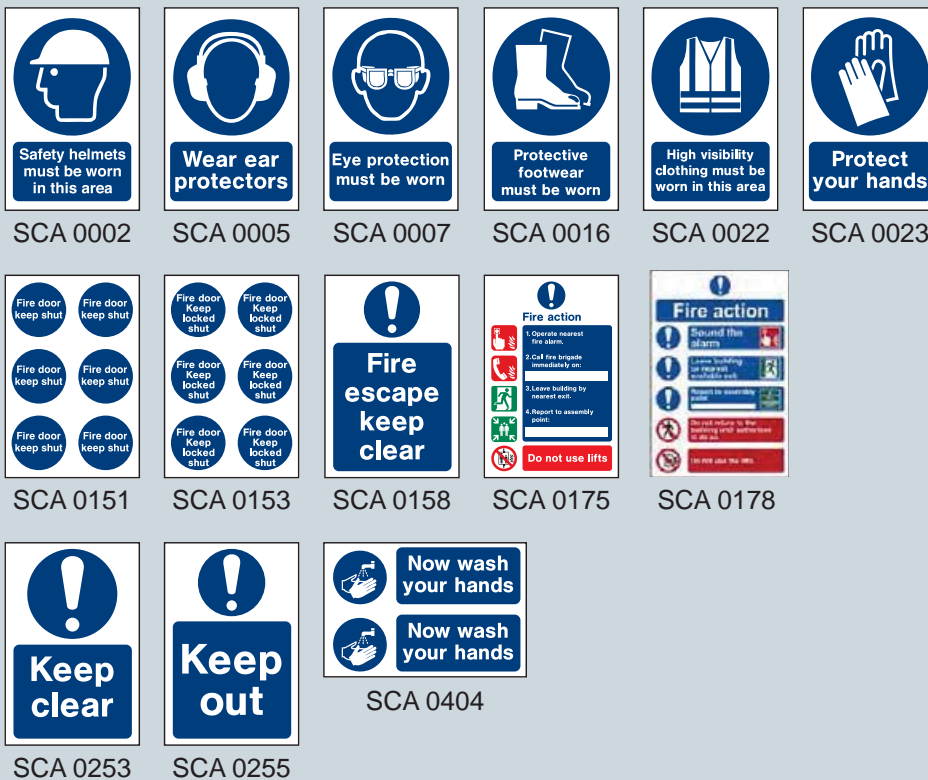

- Made from 1mm thick, durable PVC.
- Aggressive waster-based adhesive enables the sign to easily stick on to and remain on any wall.
- Printed using UV resistant inks that resist fading.
- Easy to read with clear instruction and illustration.
- Complies with ISO 7010 design criteria and helps limit company liability, should an accident occur.

Fire (Photoluminescent)

High intensity safety signs printed on 1.3mm thick rigid material with UV resistant inks to prevent fading.

The sign is photoluminescent, which means it absorbs external light to then glow in the dark. It is non toxic, non radioactive with no lead or phosphorous. Exceeds PSPA Class B classification and complies with ISO 7010 design criteria.

Industrial Stencils

Manufactured from durable polyester, which is laser cut for accuracy and definition, creating neat, legible messages. The stencils can be easily cleaned and re-used.

The stencils have letters with identical heights, with varying widths per individual character. The spacer marks in the corners of the stencils allow the user to accurately line up the next character in sequence, ensuring neatness.
