

Safety Footwear

All of the boots in the SCAN range benefit from having steel mid-soles to ensure underfoot protection and steel toe-caps which will withstand 200 Joules of impact, giving all round protection to the wearers feet.

The soles have a slip resistant pattern with an energy absorbing heel.

They are antistatic and resistant to oil.

They are compliant with current EN Standards: EN ISO 20345:2011 - S1 P SRC.
