Welcome to the SCAN range of Safety & Workwear products

The SCAN brand offers a comprehensive range designed to meet the needs of both DIY and Trade Users.

The SCAN range of safety products is designed to protect wearers in the most frequently occurring circumstances under which personal protection is either required or recommended in building, construction, maintenance and associated industries.

User comfort and long lasting service are the main considerations for the SCAN range of workwear products which are designed to cater for the needs of both the professional user and enthusiastic DIYers.

The products are manufactured to a standard that reflects the tough environment in which they are likely to be worn.

Personal Protection Equipment

The largest part of this range is dedicated to the area of Personal Protection Equipment and is designed to provide solutions for protection to ears, eyes, face, hands and head.

Almost on a daily basis legislation is increasing, relevant to the protection of the individual, within the working environment.

In order to meet these demands all SCAN products are tested to ensure that they comply with British, European or International specifications and all comply with current legislation as applicable.

SAFETY HELMETS

Compulsory on British building sites since March 1990. Hard hat protection provides a rigid shell that resists and deflects blows to the head with a suspension system inside the hat that acts as a shock absorber.

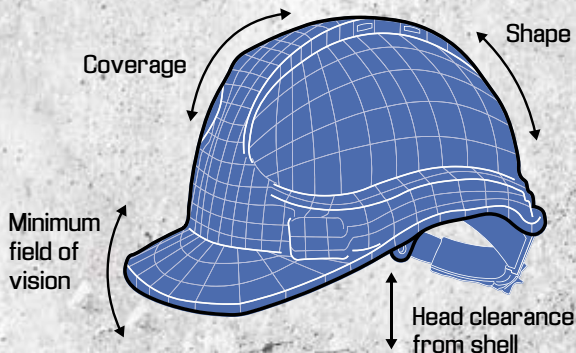

EN397: 2012

Employers must provide hard hats to employees and ensure that hard hats are worn when there is a risk of head injury.

Self-employed people must provide their own hard hats.

Standard Requirements:

Part of this standard means the safety helmet meets or passes the following:

Manufacturers information

Date of manufacture, material, model number, brand, CE and EN markings (located under the visor).

5kg Impact resistance:
A circular weight dropped from 1m height, transmitted force cannot exceed 5kn.

3kg Penetration resistance:
A spike dropped from 1m height, spike must not penetrate the shell.

Chin strap anchorage points.

Safety Helmet Markings

As part of EN397:2012 there must be a selection of information visible on the product itself in order to acquire this mark. Familiarising yourself with these will not only be useful to make sure you are purchasing a product that conforms to the correct standard but also to its age, confirming when the product was produced.

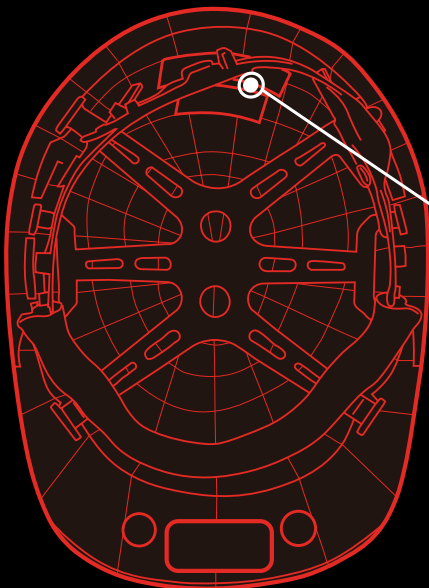

- ① HDPE outer shell
- ② 6 point harness
- ③ Harness adjuster
- ④ Top vents
- ⑤ Protective peak

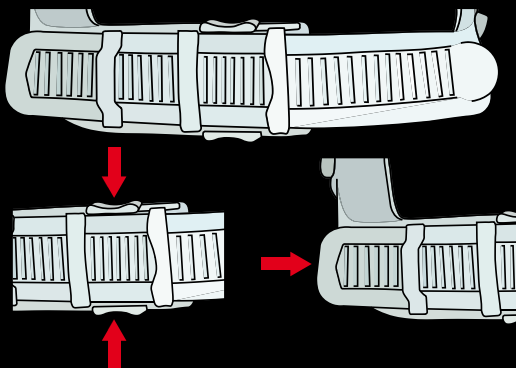

Standard

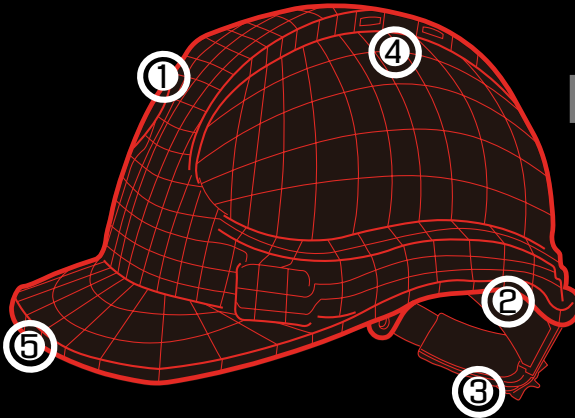

- ⑥ Brand
- ⑦ Part number
- ⑧ CE Mark
- ⑨ EN Standard
- ⑩ Shell material
- ⑪ Manufacture date

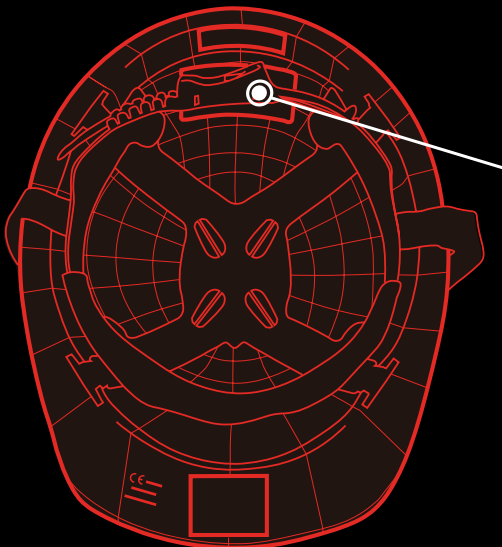

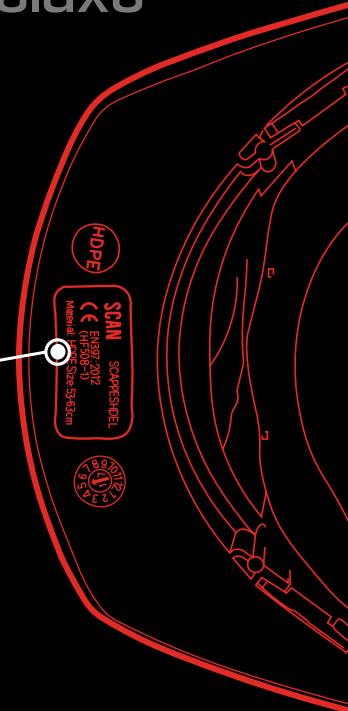

Harness adjustment

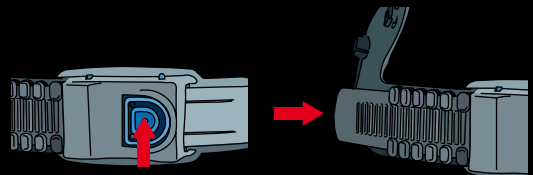

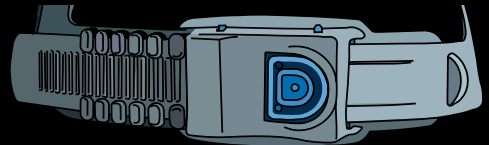

All this is necessary as after the point of purchase it is down to the individual to ensure the safety helmet remains in good condition, use with due diligence as well as making sure it meets the intended requirements. These two pages show a simple breakdown of what you will find on the underside of our Scan Safety Helmets.

Deluxe

Harness adjustment

Standard Industrial Safety Helmet

CONFORMS TO
EN397:2012
+ A1:2012

This industrial safety helmet is manufactured from high density polyethylene (HDPE) and features top vents, a pinlock harness and a rain gutter. Head protection is essential for site workers for protection from falling objects or striking against fixed obstacles.

340 grams
HELMET WEIGHT

- Six point polythene harness with sweat band
- Rain gutter to channel water away from the helmet and face
- Easily adjustable to fit head sizes from 530mm - 630mm

Standard Industrial Safety Helmet

Exc VAT

£6.42

€7.45

Chin Strap

This Scan adjustable chin strap is designed to offer light-duty chin protection and adjustability as a spare for the Scan standard safety helmet. It ensures a more secure fit and a safer working environment by minimising the risk of it falling off.

- Chin guard for protection and secure fit
- Designed to fit the Scan standard safety helmet

Our colour reference is only a guide. Each site may have their own, it's down to the individual or site supervisor to manage and enforce the colour co-ordination.

SCAPPESHBK

Supervisors usually wear black hats on site.

SCAPPESHB

Carpenters and other technical operators including electricians.

SCAPPESHO

Lifting operators, Banksman slingers / signalers or traffic marshals.

SCAPPESHR

Fire Marshal's usually wear red hard hats.

SCAPPESHW

Site managers, foremen or engineers usually wear white hats on site.

SCAPPESHY

General labourers and earth moving operators.

De-luxe Industrial Safety Helmet

A tough and functional polypropylene HDPE helmet with top vents, polyethylene (PE) harness with ratchet and a rain gutter. Head protection is essential for site workers for protection from falling objects or striking against fixed obstacles.

SCAPPESHDELY Yellow De-luxe Safety Helmet

EAR PROTECTION

SNR: Simplified Noise Level Reduction

(the number of decibels reduced by the product)

Hearing protectors create a physical noise reducing barrier to avoid damage to the sensitive and fragile parts of the inner ear.

Eighty-five decibels (dB) is the level above which hearing protection is recommended, to avoid hearing loss from the cumulative effects of exposure to noise over time.

How can you tell if the noise level is 85dB?

Here's a quick test: If you have to raise your voice to talk to someone who is an arm's length away from you, you are likely to be in an environment with a sound level of 85dB or more!

Classes

Noise Level Examples	dB	CLASS	Noise Level Range
Ringling Telephone	80	1	Less than 90dB
Loud Radio	80	1	Less than 90dB
Busy Traffic	80	1	Less than 90dB
Band Saws	85	2	Less than 90dB
Power Lawn Mower	90	2	90-95dB
Belt Sander	93	2	90-95dB

EYE PROTECTION

EYE PROTECTION

A range of goggles, spectacles and face shields providing a level of protection over a wide span of applications and hazards.

Optical Classes

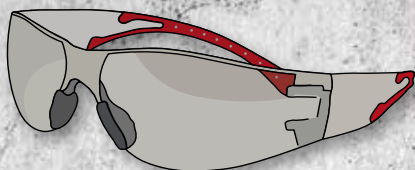

There are three different types of optical class, each level detailing how often the glasses should be used due to their relative quality.

Class 1	Permanent wear (distortion free)
Class 2	Occasional wear
Class 3	Brief wear

Safety Standards

Spectacles

CONFORMS TO
EN166:1F

F - high speed particles, low energy impact (any type).

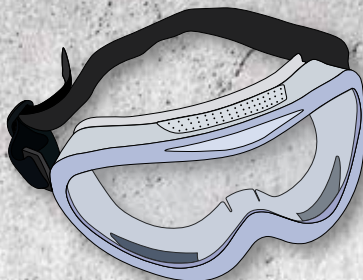

Suited for tasks such as drilling, sawing, grinding and hammering.

EN166 : F is the highest standard available in safety spectacles. Impact resistance for mechanical strength.

Grade F is tested by firing a 6mm steel ball weighing 0.86 grams travelling at maximum 45m/s (100mph) at the time of impact.

Goggles

CONFORMS TO
EN166:1B

B - high speed particles, medium energy impact (goggles and face shields).

The goggle housing has a higher impact resistance and allows greater protection from hazardous liquids, dust and gases.

Goggles provide the optimal protection for mechanical strength (6mm 0.86 gram steel ball at max 120m/s (270mph) on impact).

Visitor Safety Spectacles

A wrap-around eyeshield for protection against low energy high speed impacts up to 45m/s (101mph).

- Clear polycarbonate UV resistant construction
- Wrap-around panoramic vision for less distortion
- Comfortable wide frame and integral brow shield gives improved all round protection
- Ultra lightweight, can be worn over most prescription glasses

RESPIRATORY PROTECTION

Introduction to RESPIRATORY PROTECTION

To help you meet Health and Safety demands for personal protection, the SCAN respiratory range offers an extensive range of disposable masks and respirators.

The Hazards

Dust

Formed by the breaking down of solid materials, normally when materials are altered. For example, sanding, cutting, grinding and brushing. In general the smaller the dust particle, the greater hazard that it represents. Fibres from materials should also be treated as dusts.

Mist

Formed by processes that involve atomisation (such as spraying, cleaning and cutting/grinding using coolants) and consist of tiny liquid droplets rather like steam in a bathroom.

Fumes

Formed by the vapourisation of a solid material by the application of intense heat. Extremely fine particles are formed as fumes cool and condense. Many processes form fumes; such as smelting, pouring metals and many welding applications.

Vapour

A gaseous state formed by evaporation from substances that are normally either solid or liquid at room temperature (e.g. methylated spirits, petrol). Many industrial processes used in degreasing vapourise particularly quickly once heated.

RESPIRATORY PROTECTION

selection guide

This table has been designed to help you select the correct SCAN respirator for a selection of hazards that may be encountered in the occupational area. It should not be used as the only means of selecting a respirator and it does not relieve the employer/user of their duties as described by COSHH and other Health & Safety Executive Regulations. It does not in any way override any recommendations made in the required appropriate COSHH/Risk assessment.

Minimum Respiratory Requirement to be used Disposable Dust Masks (EN 149)

EN Number	Filter/Class	Allowable Penetration	APF	NPF
EN149	FFP1	20%	4 x OEL	4
	FFP2	6%	10 x OEL	12
	FFP3	1%	20 x OEL	50

OEL - Occupational Exposure Limit is the 'Safety' line decided upon by the Health & Safety Executive.

APF - Assigned Protection Factor is the level of respiratory protection that can be expected to be achieved in the workplace by 95% of adequately trained and supervised wearers using a properly fitted and functioning respiratory protective device.

NPF - Nominal Protection Factor is the potential maximum protection factor using the maximum percentage inward leakage permitted for a given standard class of respiratory protective device, expressed as a ratio:

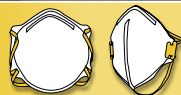

100%

% allowable inward leakage

EN140**

Half Mask Respirators

The European standard that covers the technical specifications for half masks which cover the nose, mouth and chin. They have their face piece manufactured from natural or synthetic based rubber allowing the mask the flexibility to fit the contours of the face.

**CONFORMS TO
EN143**

Half Mask Filters

Covers particle filters. These are classified according to their filtering efficiency P1, P2 and P3. P1 filters are intended for use against solid particles only, P2 and P3 filters are subdivided according to their ability to remove both solid and liquid particles or solid particles only.

Disposable Masks

Unlike any other bodily injuries, respiratory injuries are not readily apparent in the workplace. In some cases, it may not be until after workers retire that symptoms occur. It is therefore important that all staff that are, or may be at risk have access to Respiratory Protective Equipment.

The Mask Protection Levels

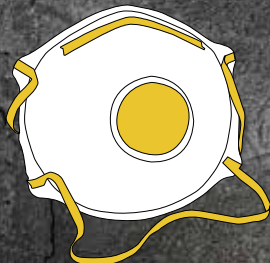

Understanding the protection levels of our masks will ensure you have the correct product for your working environment

FFP1 NR

Each product will have 1 of 3 protection levels

FFP3 NR

***HI-VIS
PROTECTION***

Introduction to HIGH VISIBILITY WORKWEAR

EN20471

All protective high visibility gear should meet the requirements of The safety at Street Work and Road Works Code of Practise.

EN20471 sets minimum standards of visual performance and durability needed for high visibility clothing worn in the course of a trade or profession and is mandatory.

Hi-Vis and Reflective Banding

Three classes of visibility (Class 1, 2 & 3) and two levels of retro-reflectivity (Level 1 & 2) appropriate to the risks in a particular occupational environment. (Level 2 gives the highest reflectivity).

CLASS 1 LOW VISIBILITY

The lowest level of protection and should only be worn in areas of minimal risk, e.g. off-road situations.

NOT suitable for working with road traffic

CLASS 2 INTERMEDIATE VISIBILITY

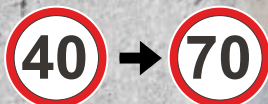

The minimum requirement when working on roads. Certain industries may have established codes of practise that give guidance on the selection of high visibility clothing when working in certain road conditions.

Only suitable on roads where the speed limit is LESS than 40mph

CLASS 3 HIGH VISIBILITY

Should be worn on ALL roads where the speed limit is 40mph and above

Incorporates the largest areas of fluorescent and reflective materials and should be worn on trunk roads and all other roads forming the Primary Route Network (PRN), as well as roads displaying green/blue directional signs.

X Y High-visibility PPE and Retro-reflective band classes

PPE categories

There are 3 PPE categories:

Category I: PPE to protect against minimum risks.

Category II: PPE to protect against medium to high grade risks, although not mortal or irreversible.

Category III: PPE to protect against life-threatening or irreversible risks.

X There are 3 classes of high-visibility PPE:

Class 1: Low visibility level
fluorescent $0.14m^2$,
retro-reflective $0.10m^2$ or combined $0.20m^2$.

Class 2: Medium visibility level
fluorescent $0.50m^2$
and retro-reflective $0.13m^2$.

Class 3: High visibility level
fluorescent $0.80m^2$
and retro-reflective $0.20m^2$.

Y There are 2 classes of retro-reflective bands:

Class 1: Medium retro-reflective level

Class 2: High retro-reflective level

CONFORMS TO
EN343

Water Penetration/ Breathability

This standard encompasses materials and stitching and is divided into two sections: water penetration and resistance to water vapour.

For water penetration there are three classes, where Class 2 requires W_p (water pressure) ≥ 8000 Pa and Class 3 requires $W_p \geq 13000$ Pa.

Class 1 requires the same as Class 2, but without pre-treatment.

For resistance to water vapour (RET), (the lower the rating the greater the penetration) there are 3 classes:

Class 1: $RET \geq 40$,

Class 2: $20 < RET \leq 40$,

Class 3: $RET \leq 20$

FOOT PROTECTION

INTRODUCTION TO SAFETY FOOTWEAR

All of the boots in the SCAN range benefit from having steel mid-soles to ensure underfoot protection and steel toe-caps which will withstand 200 Joules of impact, giving all round protection to the wearers feet.

The soles have a slip resistant pattern with an energy absorbing heel. They are antistatic and resistant to oil.

They are compliant with current EN Standards.

FALL ARREST PROTECTION

Inspecting Fall Arrest Equipment

Made from webbing or rope

The following information may prove useful for anyone supplying fall arrest equipment incorporating energy absorbing lanyards made from webbing.

It gives generic advice on inspection regimes for this equipment where it is used to provide protection against falls from a height. However, many of the principles can also be applied to non-energy absorbing lanyards and safety harnesses used for the same purpose. They can also be applied to similar equipment such as anchor points.

Employers should consult the manufacturer and/or supplier of the equipment for any product-specific inspection requirements.

Introduction

An energy-absorbing lanyard is a line for connecting a full body harness to an anchorage point with an inbuilt device that reduces the impact of a fall.

There is a wide range of possible causes of degradation of synthetic fibres used in webbing and rope lanyards (including abuse, general wear and tear, edge/surface damage, ultraviolet light, dirt, grit, chemicals).

Research involving synthetic fibre webbing lanyards has confirmed a number of the potential causes of degradation. It also highlighted that there is no well-defined boundary (e.g. usable life) separating those lanyards that are safe and those that are not (e.g. a 1mm cut in the edge of a lanyard can result in a 5 to 40% loss of strength depending on the make of lanyard being used). It is therefore essential that if lanyards are to be maintained to provide the required level of protection they are subject to an effective inspection regime

Inspecting Fall Arrest Equipment

Made from webbing or rope

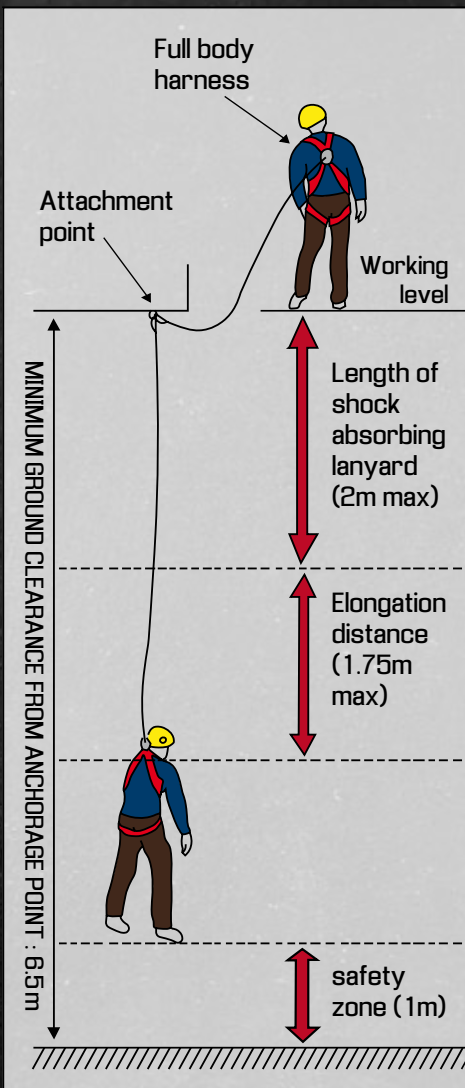

Legal requirements and standards

The Personal Protective Equipment at Work Regulations 1992 (as amended) require employers to maintain fall arrest equipment in good repair, including appropriate replacement. In addition, the Work at Height Regulations 2005 require that equipment which is exposed to conditions causing deterioration which is liable to result in dangerous situations should be inspected at suitable intervals and each time exceptional circumstances which might jeopardise safety have occurred.

BS EN 365:2004 Personal protective equipment against falls from height. General requirements for instructions for use, maintenance, periodic examination, repair, marking and packaging gives general requirements for periodic inspection, instructions for use and marking of PPE against falls from a height.

To counter the causes of degradation listed to the Introduction, the British Standard states that components should be examined 'at least twelve-monthly'. This is sometimes taken to be 'annually', although manufacturers of textile products usually recommend inspection more frequently than this.

Safe working height guide:

Fall Arrest Lanyard 1.95 metres

Inspection regime

The inspection regime recommended in this leaflet has been discussed with representatives of manufacturers, suppliers, installers and major users via the British Standards Institution Technical Committee PH/5 (industrial safety belts and harnesses), the British Safety Industry Federation Height Safety Group and the Work at Height Safety Association.

Employers should establish a regime for the inspection of lanyards that is drawn up by a competent person. The regime should include:

- the lanyards to be inspected (including their unique identification)
- the frequency and type of inspection (pre-use checks, detailed inspection)
- designated competent persons to carry out the inspections
- action to be taken on finding defective lanyards
- means of recording the inspections
- training of user and a means of monitoring the inspection regime to verify inspections are carried out accordingly.

Falls from height are the most common cause of fatal injury and the second most common cause of major injuries, accounting for around 15% of all such injuries in the workplace.

Fall Arrest Harness

2 Point Anchorage

The most commonly used full body harness comes with metal D-Ring attachment and leg straps. Suitable for most work at height applications in the construction industry (scaffolders, steel erectors etc).

- Supplied with a thick micron poly bag
- Complete with an auto-lock carabiner
- Shoulder, leg and chest adjustment
- Dorsal and front fall arrest link
- Polyester webbing

MEDICAL PROTECTION

BS-8599 British Standard Workplace FIRST AID KITS

What the law says

The Health and Safety (First Aid) regulations 1981 states:-

“An employer shall provide or ensure that there are provided such equipment and facilities as are adequate and appropriate in the circumstances for enabling first-aid to be rendered to his employees if they are injured or become ill at work”

The new BSI first aid kits are now the only safe and clear way for an employer to meet their obligations

The HSE position

The Health and Safety Executive have been closely involved in the creation of this standard, being members of the BSI standards committee. The current guidelines contained in document L74 from the HSE are met and exceeded by the new BSI standard.

Why did we need a new standard?

Despite many EU states having a national standard for workplace first aid kits, until now, the UK did not. The BHTA guidelines, established in 1997 were in need of revision because training protocols have changed, there are heightened concerns with infection control, and new technology is now available at affordable prices.

In our range there are two sizes of first aid kits available.

No. of Employees	SCAN Product Code
1 to 25	SCA FAK125BS
1 to 100	SCA FAK1100BS

What size is required?

Employers are required to make a risk assessment to decide what the hazard levels are and how many employees are involved in the area to be covered. There is a useful guide provided to help match this risk assessment to an appropriate size kit.

There was only one pair of gloves in a 10 person kit - yet 33 dressings. There were 4 triangular bandages - even though the training protocols no longer indicate their use for immobilisation of lower limb fractures. Burns gel dressings are extensively used in first aid - now very available and affordable. The new kits have good quantities of plasters and wipes, a common criticism of the old ones.

The New Contents

Gloves

More quantity reflecting the need, and Nitrile type in line with NHS and St. John Ambulance guidelines.

Plasters

Sensible quantities, reflecting consumer demand.

Wipes

Increased quantities, reflecting consumer demand. New specification is sterile and now must meet the European CE marking rules.

Triangular Bandages

Quantities are reduced reflecting the change in training first aid protocol, where immobilisation of lower limbs using triangular bandages is no longer indicated.

Finger Dressings

A smaller finger dressing is introduced specifically for finger injuries that are too large for first aid plasters, dressing complete with an easy-fix adhesive tab.

Foil Emergency Blanket

Clinical shock presents one of the most serious life threatening risks to a casualty, treatment includes keeping the casualty warm. The introduction of the foil survival blanket enables this.

Mouth To Mouth Resuscitation Device

The introduction of a mouth to mouth resuscitation device, incorporating a one way valve, protects the first aider from infection from body fluid pathogens.

Eye Wash

Incorporated into the travel kit since fixed eye wash stations are unlikely to be available. The environment of a travelling worker is unpredictable and could include a risk to eyes.

First Aid Guidance Leaflet

Conforming to the latest HSE guidance.

Medium & Large Dressings

Fewer quantities, reflecting consumer demand.

Burns Gel Dressing

Every employer with as much as a kettle, must have a risk from burns. A modern burns gel dressing is added to meet this risk, together with a conforming bandage to attach and retain it.

Shears

Clothing around wound sites needs to be removed to allow first aid treatment. Shears, capable of cutting fabric and leather enable this removal.

Adhesive Tape

Many first aiders prefer not to use safety pins, where additional injury could potentially be caused. Adhesive tape is an easy and inexpensive way to secure dressings and bandages. Safetypins are retained, allowing users a choice of application.

Household & Burns

45 piece kit supplied in a weatherproof four pocket travel bag with handle and belt clips. Suitable for use in the home and outdoors to treat burns, grazes and cuts.

CLEANING EMERGENCY

Spill and Leak Control

A range of products for coping with spills involving water, oil, fuel and chemicals.

The absorbent pads come colour coded as they are available in three types to absorb different liquids

Black

Absorbs coolant, oil, water, solvent and non-aggressive fluids.

Ideal in the plumbing trade for boiler leaks etc.

White

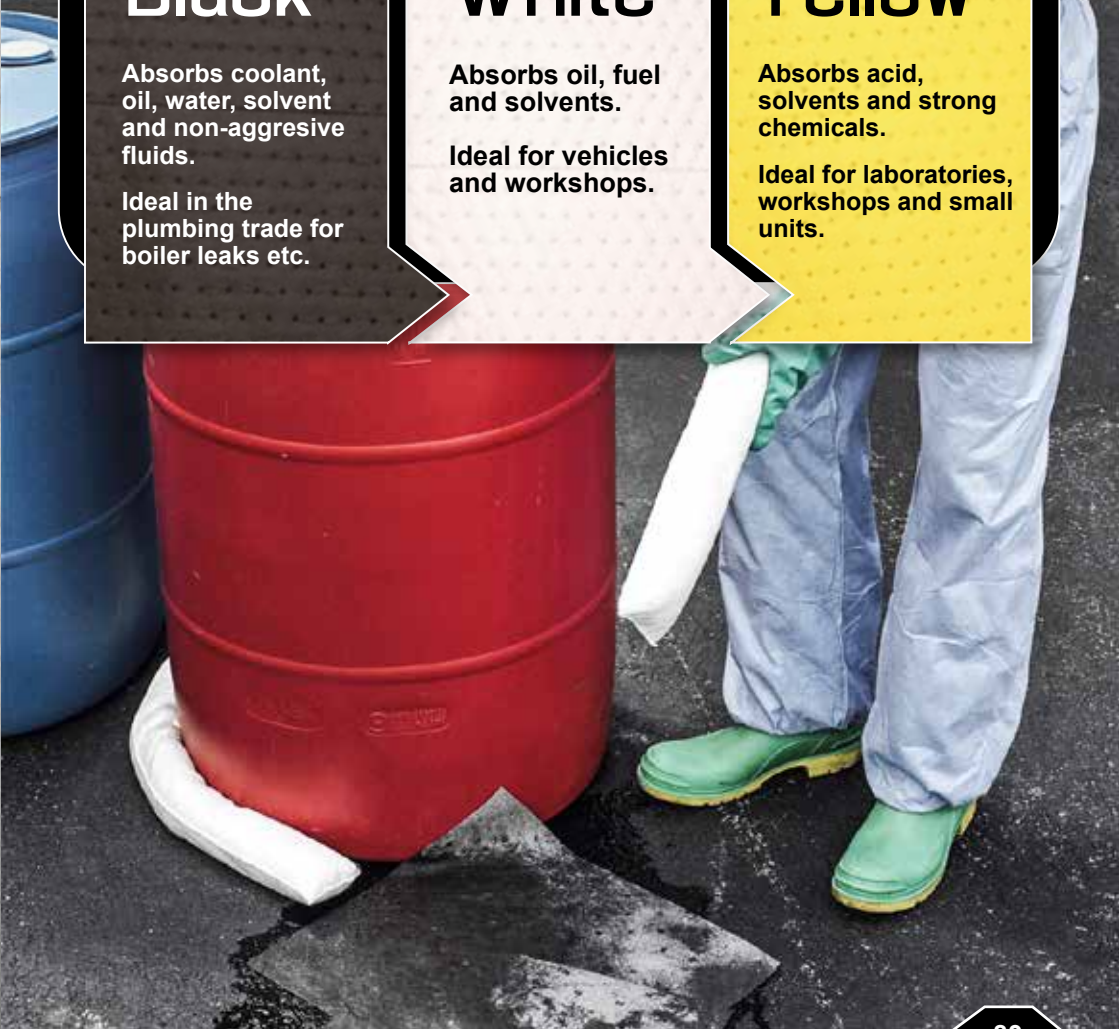

Absorbs oil, fuel and solvents.

Ideal for vehicles and workshops.

Yellow

Absorbs acid, solvents and strong chemicals.

Ideal for laboratories, workshops and small units.

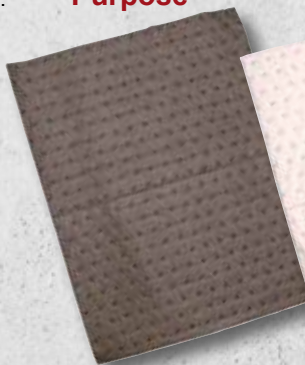

Absorbent Pads

Absorbent pads are ideal for dealing with small leaks and spills. Designed specifically to absorb oil, fuel and solvents. They are bonded for extra strength.

- Pad dimensions 550 x 450mm
- Able to absorb over a litre per pad

Spill Kits

Spill kits are ideal for dealing with larger spills of up to 18 litres. The high performance absorbent socks contain leaks.

These kits each contain:

- 1 disposal bag with tie
- 10 high performance absorbent pads (40 x 50cm)
- 2 high performance absorbent socks (8 x 120cm)

Inc VAT	£25.13	€29.88

Universal Absorbent Quick-rip Roll

A non-linting absorbent roll. Bonded for strength and perforated bi-laterally for easy tearing. Extremely versatile and stronger than normal paper wipes.

- Length 31 metres
- Width 31cm

- Absorbs:
- Coolant
 - Solvents
 - Water
 - Non-aggressive fluids
 - Oil

SCA SCUAROLL

Exc VAT	£42.66	€49.49
Inc VAT	£51.19	€60.87

Paper Towel Wiping Roll

Essential for all cleaning and wiping tasks, this two-ply blue paper roll is perforated to give an economical 430 sheets.

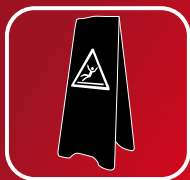

- Length 150 metres
- Width 20cm

For general purpose wiping in kitchens, workshop and garages.

SCA SCPAPROLL

Exc VAT	£10.42	€12.09
Inc VAT	£12.50	€14.87

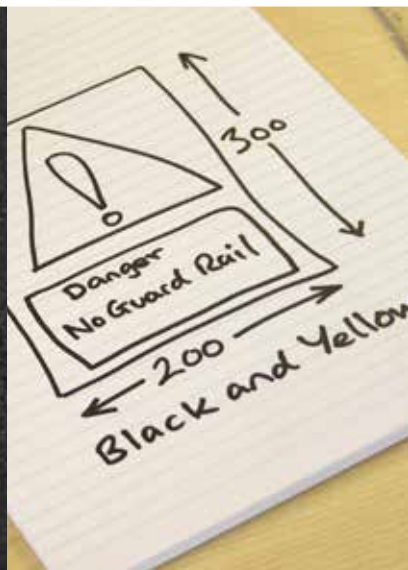

SAFETY SIGNS

Design a Sign

Our bespoke sign manufacturing team have had many years of experience in designing, making and fitting a massive variety of signs and stencils nationwide.

From the smallest 'one-off' vinyl sign to the large retail signs to print runs of thousands of own branded safety signs, we can be depended upon to provide a fast, quality service at a reasonable cost.

We are happy to work with you to design a sign to your exact specifications. We can work with artwork provided or redesign new artwork as desired - Please contact our Enquiries Hotline to discuss the options available.

To order a custom sign, this is what you need to know:

1. The size and material
2. The colours and symbol required
3. Quantity needed
4. The text required on the sign
5. Any other considerations such as specific Pantone colours, fixing methods or company logo's.

It will help if you can provide a rough sketch of the sign (like above). If you need advice on the correct colours or symbols required, or if you require advice on specific legislation then we would be pleased to help.

A sign should convey to the reader its message as clearly and in as short a time as possible, whilst ensuring the information given is complete and accurate.

Symbols and Colours

Health and Safety signs can be broken down into the following categories, as specified by British Standards.

Our products are under continual development and/or are determined by legislation requirements

Mandatory Signs

Colour: White & Blue

A blue circle containing a white image denoting that a specific course of action **must** be taken.

Prohibition Signs

Colour: Black, Red & White

A red circular band crossed with a diagonal bar on a white background. A black symbol behind this band indicates the prohibited action.

Hazard Signs

Colour: Black, Yellow & White

A yellow triangle with a black border and symbol denoting a hazard in the environment.

Safe Condition Signs

Colour: White & Green

A green rectangle or square with a symbol/text in white providing information about safe conditions.

Fire Equipment Signs

Colour: White & Red

A red rectangle or square with a symbol/text in white providing information about the location and use of fire fighting equipment.

We reserve the right to modify signs as we deem necessary. Product sizes, materials and colours are subject to standard commercial tolerances and are shown in nominal form.

Where possible, all signs are made to the latest symbols detailed in
BS ISO EN 7010.

In cases where an ISO symbol has not been specified then the sign will be manufactured to BS 5499 standards until one has been published, at which point the stock will be updated and supplied in lieu of the design shown in the catalogue.

The signs contained within this catalogue are just a small selection from our overall range of over 10,000 safety signs that are available within 48 hours.

For further details please ask your local stockist or request our Safety Sign Catalogue.

EN ISO 7010 ***A Guide To New Sign Symbols***

The BS EN ISO 7010:2012 regulation ensures that all graphical safety symbols are consistent and compliant. It is a design directive and is a list of compliant symbols.

Are your ISO Symbols current?

Industrial Stencils

Manufactured from durable polyester, which is laser cut for accuracy and definition, creating neat, legible messages. The stencils can be easily cleaned and re-used. The stencils have letters with identical heights, with varying widths per individual character. The spacer marks in the corners of the stencils allow the user to accurately line up the next character in sequence, ensuring neatness.
