

Fall Arrest Pro Harness SCAFAHAPR05

Inspection regime

The inspection regime recommended in this leaflet has been discussed with representatives of manufacturers, suppliers, installers and major users via the British Standards Institution Technical Committee PH/5 (industrial safety belts and harnesses), the British Safety Industry Federation Height Safety Group and the Work at Height Safety Association.

Employers should establish a regime for the inspection of lanyards that is drawn up by a competent person. The regime should include:

- the lanyards to be inspected (including their unique identification)
- the frequency and type of inspection (pre-use checks, detailed inspection)
- designated competent persons to carry out the inspections
- action to be taken on finding defective lanyards
- means of recording the inspections
- training of user and a means of monitoring the inspection regime to verify inspections are carried out accordingly.
