CATALOGUE | 2023

FABRICS

Our carefully chosen fabrics are designed to withstand demanding conditions and provide lasting durability. Constructed from up to 300 Denier 100% polyester, these fabrics offer top-notch functionality. Equipped with robust zippers and reinforced closures, they are built to endure various conditions.

Our waterproof garments are treated with a water-resistant coating and seam-welded to keep dampness at bay. With quilted liners and concealed hoods, our jackets are designed to keep you warm while ensuring breathability and comfortable fit throughout the day.

TESTING

Our products are independently tested and certified by accredited, notified and approved bodies from across the world. Marked with both CE and UKCA markings, our garments conform to the industry's PPE regulations and standards.

RIS-3279-TOM UK RAILWAY STANDARD

RIS-3279-TOM (formerly GO-RT 3279) is a high visibility standard that only applies to the rail industry in the UK, as opposed to the EU-wide nature of other EN standards. The aim is to ensure that rail workers on or near the trackside are sufficiently visible to trains approaching at speed or any other traffic. See garments marked with an icon for conformity.

SUSTAINABILITY

We are committed to minimizing our environmental footprint, and therefore, we diligently pursue the adoption of sustainable practices and materials whenever feasible.

All plastic bags employed for packaging our garments are crafted entirely from recycled plastics, aligning with our dedication to responsible sourcing.

Scan proudly holds membership in Sedex, the world's foremost data platform for evaluating supply chain practices, encompassing storage, analysis, sharing, and reporting of sustainability measures.

We ensure our factories are audited using the Sedex Members Ethical Trade Audit, underscoring our dedication to upholding ethical and responsible trade practices.

EN ISO 20471:2013+A1:2016

EN ISO 20471

Specifies requirements for high visibility clothing which is capable of visually signalling the user's presence. The high visibility clothing is intended to provide conspicuity of the wearer in any light condition when viewed by operators of vehicles or other mechanized equipment during daylight conditions and under illumination of headlights in the dark.

Performance requirements are included for colour and retroreflection as well as for the minimum areas and for the placement of the materials in protective clothing.

EN 343

EN 343 is a measure of waterproofing and breathability within the protective garment and these standards ensure ideal outdoor workwear. Items that are tested using EN343 standards are judged on two categories. Firstly, protection against wet weather, fog and humidity. Secondly, breathability and ensuring moisture or sweat can escape. These are rated from one to three with three representing the highest level of protection.
